

Sports Hall Booking System Project Documentation

1. Project Overview

The Sports Hall Booking System is a digital solution developed on the ServiceNow Service Portal platform. It streamlines and automates sports hall reservations by replacing manual or paper-based booking methods with a secure, efficient and user-friendly online portal. The system enables users to view hall availability, submit booking requests and manage reservations while reducing administrative effort.

2. Problem Statement

Traditional manual booking processes lead to scheduling conflicts, double bookings, lack of centralized visibility, difficulty in handling multiple requests simultaneously and absence of automated notifications and confirmations.

3. Business Objectives

Primary objectives include digitizing the booking process, reducing administrative workload by approximately 60%, providing 24/7 access to authorized users, improving booking transparency and offering a centralized reservation platform.

4. Technical Implementation

A custom ServiceNow table named `u_sports_hall_bookings` stores booking information. Key fields include Refund Payment (Currency), Transaction Number (String), Reminder (True/False), Duration Hours (Decimal), Hall Name (String), Instructions (String) and Status (Choice: Pending, Approved, Rejected, Cancelled, Completed).

5. Event Registry & Email Configuration

An event named `sports.hall.reminder` is configured for the `u_sports_hall_bookings` table. A scheduled job triggers this event, which activates the 'Booking Confirmation Reminder' email notification to keep users informed.

6. Stakeholder Analysis

Project Sponsor: Funding and strategic decisions (High Influence, High Interest).
Facility Administrator: Manages hall schedules and approvals (High Influence, High Interest).
Students/Staff: End users who submit and manage bookings (Low Influence, High Interest).

7. Timeline & Scope

The project currently covers Phases 1–3. Scope includes online booking, approval workflows, automated notifications and administrative dashboards. Payment processing and mobile application development are planned for future phases.

8. Conclusion

The Sports Hall Booking System effectively leverages ServiceNow capabilities to automate sports facility reservations, reduce manual effort, improve booking accuracy and provide a reliable user experience.
